

AI Support Student — Policies & Guidelines Reference

1. AI Risk Classification

Content: AI systems are classified into four risk tiers — little/no risk, limited risk, high risk, and unacceptable risk. Systems posing “high risk” to basic rights must undergo pre- and post-conformity assessments, and risk management must cover data, algorithm, compliance, operational, legal, reputational, and regulatory risk, including bias detection and model interpretability.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (p. 8)

2. Principle 1 — Fairness

Content: Requires eliminating bias, discrimination, or stigmatization of individuals or groups in the data, design, and deployment of AI systems. Sensitive attributes tied to historically disadvantaged groups must be identified, and fairness metrics must be defined and measured before and after deployment; sensitive attributes should generally be excluded from input data unless their use is explicitly justified.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (pp. 12–14)

3. Principle 2 — Privacy & Security

Content: Personal data used by an AI system must be limited to what is necessary for the system to function. Data must be classified according to sensitivity, de-identification mechanisms must be applied to personal or sensitive data, and systems must be tested to confirm that combining available data cannot reveal sensitive data or break an individual's anonymity.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (pp. 15–16)

4. Principle 3 — Humanity

Content: AI systems should be built on fundamental human rights and cultural values, adopting a human-centric design that allows for human choice and determination rather than deceiving, manipulating, or conditioning behavior.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (pp. 17–18)

5. Principle 5 — Reliability & Safety

Content: AI systems must adhere to their set specifications and behave as designers intended. This requires adequate testing of data sample quality, stress-testing under outlier/extreme scenarios, and continuous monitoring to ensure the system does not pose risk of harm.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (pp. 21–22)

6. Principle 6 — Transparency & Explainability

Content: AI systems must be built with clarity and explainability. Individuals affected by a decision must be able to request an explanation of the rationale behind it, in an understandable and contextual manner, and the depth of explanation should scale with the severity of the outcome.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (pp. 23–24)

7. Principle 7 — Accountability & Responsibility

Content: Requires a human-controlled system where decisions remain subject to monitoring and intervention by an authorized user. Designers, developers, and owners are held responsible for AI system outcomes even when harm is unintended, and automated decisions with significant impact should trigger human oversight.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (pp. 25–27)

8. AI Ethics Checklist — Minimal Use of Personal Data

Content: Checklist item PID.9 asks whether the dataset has been reviewed to check for the presence of personal data, and whether a mechanism exists that allows the AI model to train with no or minimal use of personal or sensitive data.

Extracted from: SDAIA, AI Ethics Principles (September 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/4c56ed1c-1b82-447d-ac29-638f5f99c12e/ai-principles-EN.pdf?MOD=AJPERES> (Annexure C, p. 44)

9. Definition of Personal Data

Content: Personal data is any data, regardless of source or form, that may lead to identifying an individual specifically or make it possible to identify them directly or indirectly — including name, personal identification number, records, and other data of a personal nature (PDPL Article 1(4)).

Extracted from: SDAIA, Guide to the Saudi Personal Data Protection Law (PDPL), for Controllers and Processors (December 2023, v1.0) —

<https://dgp.sdaia.gov.sa/wps/wcm/connect/f579bc32-fda8-47bd-bc6f-66b8cb77985c/ENG-Guide+to+the+saudi+PDP+law+for+controllersprocessors.pdf?MOD=AJPERES> (p. 6)

10. Pseudonymization — Education Sector Example

Content: A university assigns each student a unique ID number; exam papers show only the ID, and the reviewing body has no access to the table linking IDs to names. This is pseudonymization — the ID numbers still count as personal data because the university retains the ability to match them back to student names.

Extracted from: SDAIA, Guide to the Saudi Personal Data Protection Law (PDPL), for Controllers and Processors (December 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/f579bc32-fda8-47bd-bc6f-66b8cb77985c/ENG-Guide+to+the+saudi+PDP+law+for+controllersprocessors.pdf?MOD=AJPERES> (pp. 13–14)

11. Sensitive Data Category

Content: Sensitive personal data requiring extra safeguards includes data revealing racial or ethnic origin, religious or political beliefs, prior criminal convictions, biometric or genetic data, health data, and data revealing whether a person's parentage is unknown.

Extracted from: SDAIA, Guide to the Saudi Personal Data Protection Law (PDPL), for Controllers and Processors (December 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/f579bc32-fda8-47bd-bc6f-66b8cb77985c/ENG-Guide+to+the+saudi+PDP+law+for+controllersprocessors.pdf?MOD=AJPERES> (p. 9)

12. Data Protection Principles

Content: Seven principles underlie the PDPL: lawfulness/fairness/transparency, purpose limitation, data minimization (not collecting more personal data than needed), storage limitation, accuracy, integrity and confidentiality, and accountability.

Extracted from: SDAIA, Guide to the Saudi Personal Data Protection Law (PDPL), for Controllers and Processors (December 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/f579bc32-fda8-47bd-bc6f-66b8cb77985c/ENG-Guide+to+the+saudi+PDP+law+for+controllersprocessors.pdf?MOD=AJPERES> (p. 24)

13. Individuals' Rights

Content: Individuals have the right to be informed of the basis and purpose of data collection, the right to access their own personal data, the right to request correction, the right to request destruction of their data, and the right to withdraw consent at any time.

Extracted from: SDAIA, Guide to the Saudi Personal Data Protection Law (PDPL), for Controllers and Processors (December 2023, v1.0) —
<https://dgp.sdaia.gov.sa/wps/wcm/connect/f579bc32-fda8-47bd-bc6f-66b8cb77985c/ENG-Guide+to+the+saudi+PDP+law+for+controllersprocessors.pdf?MOD=AJPERES> (p. 23 (PDPL Articles 4 and 5(2)))

14. AI Ethics as a Required Knowledge Unit — Bachelor's Level

Content: Bachelor's-level AI degree programs must include “AI Ethics” as a core knowledge unit, alongside units such as Deep Learning, Intelligent Agents, and Data Analysis and Visualization — not offered as an elective.

Extracted from: SDAIA, Saudi Academic Framework for AI Qualifications (Education Intelligence) (May 2025, Doc. No. SDAIA-P118) —

<https://sdaia.gov.sa/en/Research/Documents/SaudiAcademicFramework.pdf> (pp. 31–32)

15. Introduction to AI Ethics — Diploma/Associate Level

Content: “Introduction to AI Ethics” is listed as a required knowledge unit even at the Associate/Diploma qualification level, alongside foundational units like Introduction to AI and Foundation of Machine Learning.

Extracted from: SDAIA, Saudi Academic Framework for AI Qualifications (Education Intelligence) (May 2025, Doc. No. SDAIA-P118) —

<https://sdaia.gov.sa/en/Research/Documents/SaudiAcademicFramework.pdf> (p. 30)

16. Learning Outcomes — Values, Responsibility, and Autonomy

Content: At every AI qualification level, graduates must be able to uphold the AI profession's code of ethics, demonstrate responsible citizenship, and address the ethical implications of emerging AI issues; at Bachelor's level and above this extends to managing practical/research projects professionally and collaborating responsibly within teams.

Extracted from: SDAIA, Saudi Academic Framework for AI Qualifications (Education Intelligence) (May 2025, Doc. No. SDAIA-P118) —

<https://sdaia.gov.sa/en/Research/Documents/SaudiAcademicFramework.pdf> (pp. 19, 21, 25, 27, 29)

17. Six Principles for Generative AI in General Education

Content: Built from local and international benchmarking, six principles apply to generative AI use in Saudi general (K–12) education, for students, teachers, and parents alike: Responsible Use, Data Privacy and Security, Wellbeing and the Human Dimension, Fairness and Accessibility, Transparency and Accountability, and Continuous Learning and Feedback.

Extracted from: SDAIA & Saudi Ministry of Education, Guide to Guidelines for Using Generative AI in General Education (2025) —

https://www.moe.gov.sa/ar/mediacenter/MOEnews/DocLib/Artificial_Intelligence_Guide.pdf (p. 13)

18. Risks of Generative AI in Education

Content: Named risks include misuse of AI tools for unethical behavior (harmful content, plagiarism affecting academic integrity), overreliance on AI tools weakening the growth of human skills such as critical thinking and problem-solving, and generation of false or misleading information by the AI tool itself.

Extracted from: SDAIA & Saudi Ministry of Education, Guide to Guidelines for Using Generative AI in General Education (2025) — https://www.moe.gov.sa/ar/mediacenter/MOEnews/DocLib/Artificial_Intelligence_Guide.pdf (p. 11)

19. Student Guidelines — Bias-Checking Obligation

Content: Students are instructed to always check AI outputs for bias, since generative AI models are trained on large volumes of internet data that may encode cultural, racial, social, or religious bias, producing skewed or unfair results for certain groups.

Extracted from: SDAIA & Saudi Ministry of Education, Guide to Guidelines for Using Generative AI in General Education (2025) — https://www.moe.gov.sa/ar/mediacenter/MOEnews/DocLib/Artificial_Intelligence_Guide.pdf (p. 18)

20. AI Ethicist — Occupational Role Definition

Content: The AI Ethicist role is responsible for analyzing and evaluating the ethical implications of AI systems, conducting ethical impact assessments (including identifying potential bias and discrimination), reviewing algorithms and models for alignment with ethical principles, and developing ethical guidelines and policies for AI development and deployment.

Extracted from: SDAIA, National Occupational Standard Framework for Data & Artificial Intelligence (2025) — <https://sdaia.gov.sa/en/Research/Documents/PSFDataAndAIBook.pdf> (p. 29)

21. AI Risk Analyst — Occupational Role Definition

Content: The AI Risk Analyst role identifies, evaluates, and mitigates risks associated with AI systems: carrying out AI risk assessments, using continuous monitoring tools to assess risk on an ongoing basis, performing risk analysis whenever a system undergoes a major change, and developing risk mitigation strategies.

Extracted from: SDAIA, National Occupational Standard Framework for Data & Artificial Intelligence (2025) — <https://sdaia.gov.sa/en/Research/Documents/PSFDataAndAIBook.pdf> (p. 32)

22. Data Scientist — Occupational Role Definition

Content: The Data Scientist role uses advanced analytics, including machine learning and predictive modeling, to identify trends and provide automated recommendations — applying descriptive statistics, exploratory data analysis, statistical testing, and performance metrics/hypothesis testing to ensure model accuracy and effectiveness.

Extracted from: SDAIA, National Occupational Standard Framework for Data & Artificial Intelligence (2025) — <https://sdaia.gov.sa/en/Research/Documents/PSFDataAndAIBook.pdf> (p. 47)

23. AI Cybersecurity Guidelines — Structure & Applicability

Content: The guidelines consist of 4 main domains, 15 subdomains, and 42 guidelines (Cybersecurity Governance, Cybersecurity Defense, Cybersecurity Resilience, and Third-Party Cybersecurity). NCA recommends that all entities in the Kingdom that use or plan to adopt AI systems apply these guidelines and follow best practices, applying minimum requirements to reduce the cybersecurity risks that may result from using these technologies.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (pp. 6–7)

24. Cybersecurity Risk Management (Guideline 1-1)

Content: Requires identifying, documenting, approving, and implementing AI cybersecurity risk management practices across all stages of the AI system lifecycle, and conducting risk assessments for AI agents according to potential impact, likelihood of occurrence, and reversibility, applying appropriate risk treatment measures.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (p. 13)

25. Treating Externally Retrieved Data as Untrusted (Guideline 1-2-2)

Content: Data retrieved from external tools, knowledge bases, memory, or APIs must be handled as untrusted third-party data. Verification processes must be applied before injecting such data into the context window, to prevent execution of hidden malicious prompts.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (p. 13)

26. Human Oversight of AI Agent Autonomy (Guideline 1-2-7)

Content: Independent operation of an AI agent should be applied gradually, with continuous human oversight in place to monitor and understand the cybersecurity-related decisions and procedures the agent takes.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (p. 14)

27. Least Privilege & Rate Limiting (Guideline 2-2)

Content: Access privileges for users, service accounts, and AI agent accounts should be determined by job duties and need, applying least-privilege and need-to-know principles. Controls such as rate limiting and usage thresholds should be used to mitigate model-extraction and data-leakage risks.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (p. 16)

28. Data and Information Protection (Guideline 2-4)

Content: Confidentiality and integrity of AI system data — including training data, evaluation data, model weights, prompts, embeddings, records, context, and outputs — must be protected during storage, transit, and processing, with access and disclosure restricted to authorized employees only, and classified data protected per applicable legislative and regulatory requirements.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (p. 17)

29. Awareness & Training on Prompt-Related Risks (Guideline 1-4)

Content: Training programs for staff involved in AI system development or operation must cover secure prompt design, safe handling of sensitive data within prompts, recognizing prompt-injection threats and data-leakage risks, and incident reporting.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (pp. 14–15)

30. Vulnerability Response — Disable Affected Features (Guideline 2-6-3)

Content: AI features must be disabled or restricted when a cybersecurity vulnerability is discovered, until the vulnerability has been treated and verified.

Extracted from: National Cybersecurity Authority (NCA), AI Cybersecurity Guidelines (AICG-1: 2026, draft for public consultation) — <https://nca.gov.sa/en/public-consultations/ai-cybersecurity-guidelines/> (p. 18)
